Re: Reid Road Reservoir Quarry, Milton
Noise Control Berm Flood Impact Analysis

Dear Leigh:

Tatham Engineering Limited (Tatham) has been retained by James Dick Construction Limited to conduct a hydraulic analysis to evaluate the potential impact of proposed noise control berms for the Reid Road Reservoir Quarry on water levels in Kilbride Creek. The property is located about 1.5 km west of Campbellville at 9210 Twiss Road in Milton, Ontario. The property is enclosed by Highway 401 to the north, the Canadian Pacific Railway to the south and First Line Nassagaweya to the west. Kilbride Creek flows adjacent to First Line Nassagaweya near the western edge of the quarry property.

We understand that Conservation Halton has reviewed their latest flood plain mapping and advised that the proposed noise control berms could isolate portions of the flood plain. To ensure the water levels are not impacted, Tatham has reviewed and updated the hydraulic analysis of Kilbride Creek from Highway 401 to the Canadian Pacific Railway Crossing. The purpose of the hydraulic analysis is to:

- Confirm water levels from Highway 401 to the Canadian Pacific Railway;
- Confirm potential impact of proposed noise control berms on the water levels; and
- Confirm potential for noise control berms to isolate portions of the flood plain that are subject to backwater conditions and provide storage.

BACKGROUND INFORMATION

To facilitate this analysis, Conservation Halton provided the hydraulic modelling and associated flood plain shapefiles for Reaches 3 and 4 of Kilbride Creek. Reach 3 flows adjacent to First Line Nassagaweya and the flood plain has potential to be impacted by the noise control berms. Reach 4 is located further east and joins with Reach 3 at a confluence immediately upstream of Highway 9 (south of the quarry). The focus of the hydraulic analysis is Reach 3. Demonstration that the water levels in Reach 3 are not impacted will confirm that there is no impact on water levels in Reach 4.

For the hydraulic modelling, the original Conservation Halton HEC-RAS model and flood plain mapping were imported into GeoHECRAS. The quarry site plan AutoCAD drawing was overlaid to provide an accurate location of the proposed noise control berms. The area of analysis and the location of the noise control berms are shown on Figure 1 enclosed.

EXISTING CONDITIONS ANALYSIS

During the Regulatory Storm Event, Reach 3 of Kilbride Creek conveys approximately $51.5 \text{ m}^3/\text{s}$ downstream of Highway 401. The flow increases to $55.8 \text{ m}^3/\text{s}$ upstream of the Canadian Pacific Railway crossing. For existing conditions, the cross-sections through the quarry property were evaluated to determine if divided flow should exist or whether levees should be added to the cross-sections. Levees were added as appropriate. The resultant water surface elevations were compared with the original Conservation Halton model. Water surface elevations were within one centimeter of the original model.

PROPOSED CONDITIONS ANALYSIS

To evaluate the potential impact of the noise control berms, the cross-sections through the quarry property were modified. Per the quarry site plans, the noise control berm geometry was approximated into the proposed conditions cross-section geometry. Generally, the berms are located outside the floodplain conveyance pathway. In the limited areas where the berm encroaches the conveyance pathway, the obstruction is negligible such that water surface elevations are not impacted and velocities remain within 0.02 m/s of the original values. Of note, the downstream Canadian Pacific Railway crossing forms a notable obstruction to flow creating a backwater effect that keeps water surface elevations relatively consistent upstream of the crossing. From XS 1700 to XS 843 (approximately 850 m) the water surface elevation only decreases by 4 cm under both existing and proposed conditions. The water surface elevations for the original Conservation Halton model, Tatham's updated existing conditions model and the proposed conditions model are presented in Table 1 below.

Table 1: Regulatory Storm Event Water Surface Elevations

CROSS-SECTION	ORIGINAL CA MODEL	EXISTING CONDITIONS	PROPOSED CONDITIONS
1700	291.58	291.58	291.58
1650.791	291.57	291.58	291.58
1623.897	291.57	291.58	291.58
1600	291.56	291.57	291.57
1553.808	291.55	291.56	291.56
1500	291.55	291.56	291.56
1465.380	291.55	291.56	291.56
1439.602	291.55	291.55	291.55
1413.825	291.54	291.55	291.55
1400	291.55	291.55	291.55
1300	291.55	291.55	291.55
1177.562	291.55	291.55	291.55
1102.523	291.54	291.55	291.55
1040.121	291.54	291.54	291.54
1000	291.54	291.54	291.54
883.7938	291.54	291.54	291.54
843.6022	291.54	291.54	291.54

A secondary concern for the noise control berms is the potential for the berms to cut off flood storage areas. The first area where this could occur is at the southwest corner of the west pond. This is considered a negligible storage area and a hydraulic connection to this area is considered unnecessary. The second area of flood plain storage impacted by the berms is northeast of the Canadian Pacific railway crossing. This area exists primarily due to the backwater created by the crossing. An analysis of the contours upstream of the crossing shows that the proposed berm is not located in an area that will cut off the

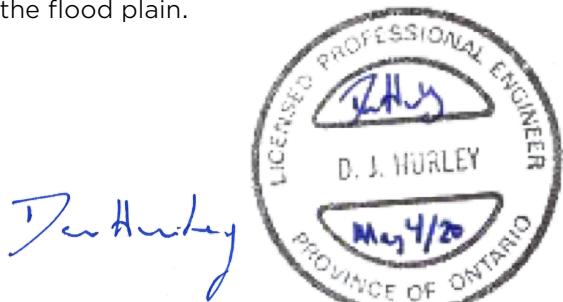

backwater. Therefore, water will still be able to back up around the berm and continue to use the flood plain storage area as per the existing condition under proposed conditions. In our opinion, there is no need to construct a flow pathway through the berm to facilitate this connection. A summary of the model results is attached and the hydraulic model has been included for reference.

In summary, the hydraulic analysis of the proposed noise control berms shows that the berms will have no impact on water surface elevations and that the berms will not cut off any of the significant flood plain storage that currently exists. Therefore, it is our opinion that the proposed noise control berms can proceed to construction with no negative impacts on the flood plain.

Yours truly,
Tatham Engineering Limited
